

Meat Messaging is an industry reporting system to allow importers, auditors and the government to verify that the physical shipments to the U.S match the data that has been uploaded to Meat Messaging by a processing plant or exporter. With less than 50 days until the Australian Department of Agriculture, Water and the Environment and Meat & Livestock Australia will cease to provide manual remarking services for missing or completely illegible shipping marks in the USA, Meat Messaging users should have a strong understanding of how to use the system.

Meat Messaging has developed some quick and easy **webinar training bites all 30 minutes and under** to ensure that Meat Messaging users can effectively utilise the system. The training bites will all be between October and December are as below:

To register for a specific meat messaging training bite, go to: <https://meatmessaging.org/> and click register under the time and date.
